

# COMP9517

## Computer Vision

2022 Term 2 Week 1

Professor Erik Meijering

**UNSW**  
SYDNEY

## Introduction

# What is computer vision?

## **Computer science perspective**

Computer vision is the interdisciplinary field that develops theories and methods to allow computers extract relevant information from digital images or videos

## **Computer engineering perspective**

Computer vision is the interdisciplinary field that develops algorithms and tools to automate perceptual tasks normally performed by the human visual system

# Every picture tells a story

“A picture is worth a thousand words”

## Computer vision

automates and integrates many information processing and representation approaches useful for visual perception

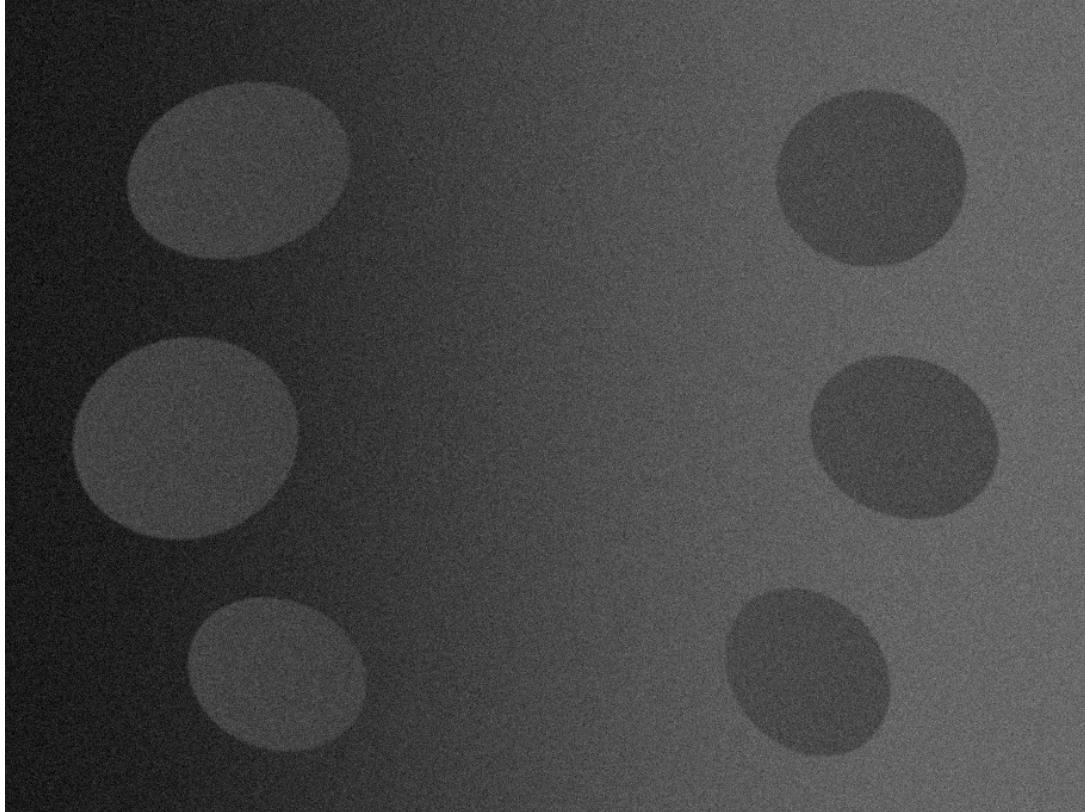

# Can computers match (or beat) humans?

## Yes and No

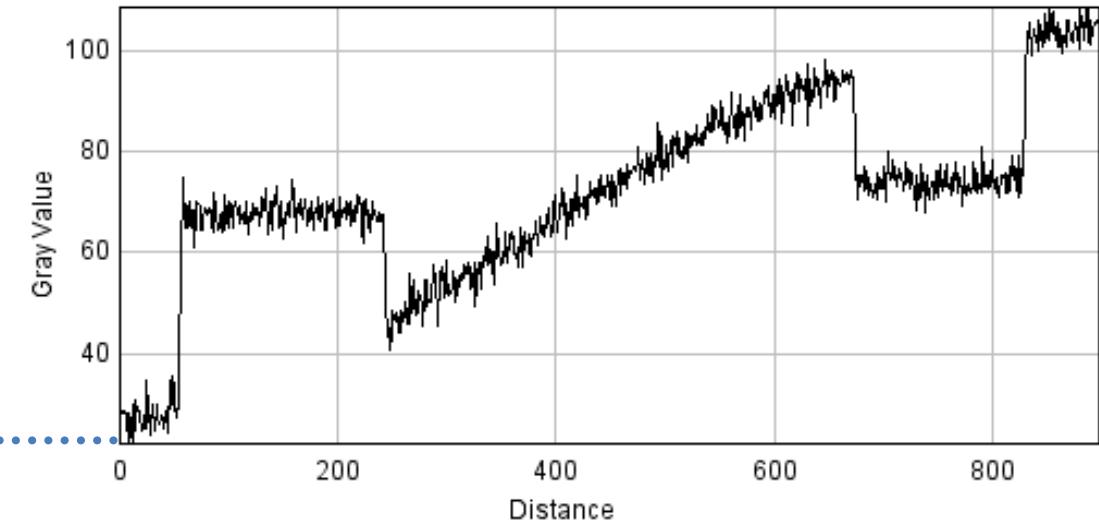

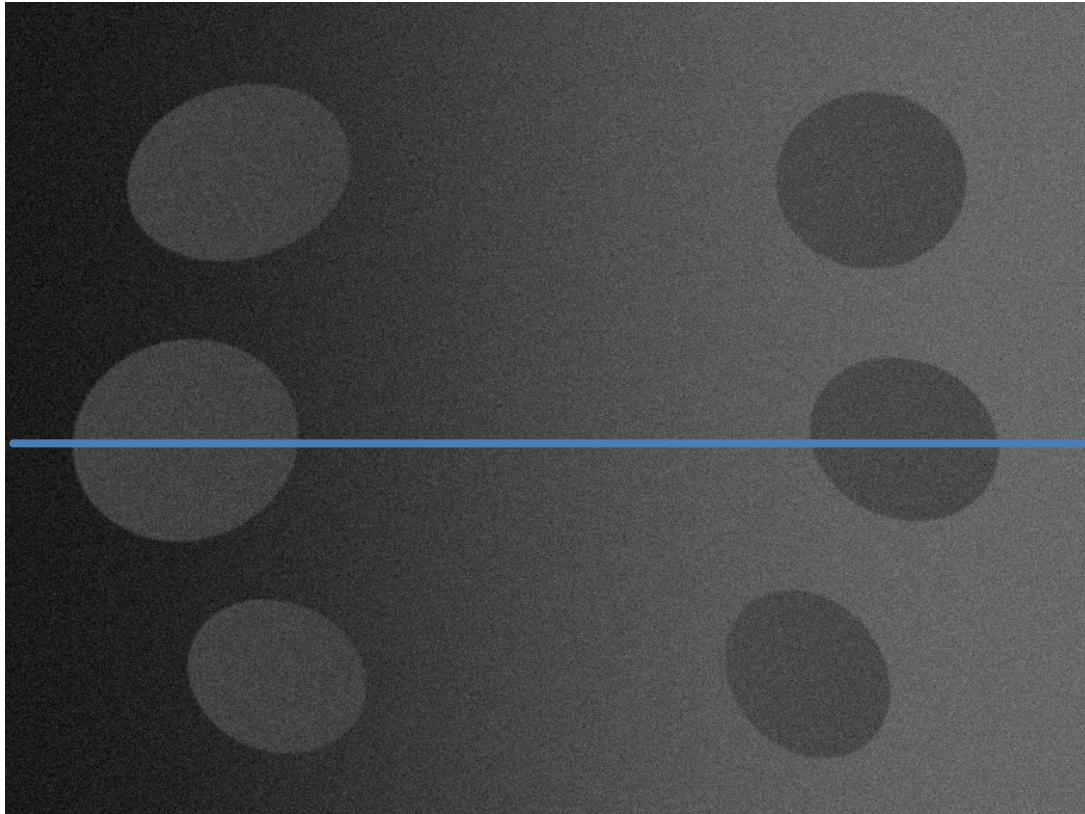

- Humans are still better at “hard” tasks  
Ambiguous data, leveraging prior knowledge, continual learning, working across applications
- Computers can be better at “easy” tasks  
High-quality data, using mathematical models, consistent training set, single well-defined application

# Human vision has its limitations...

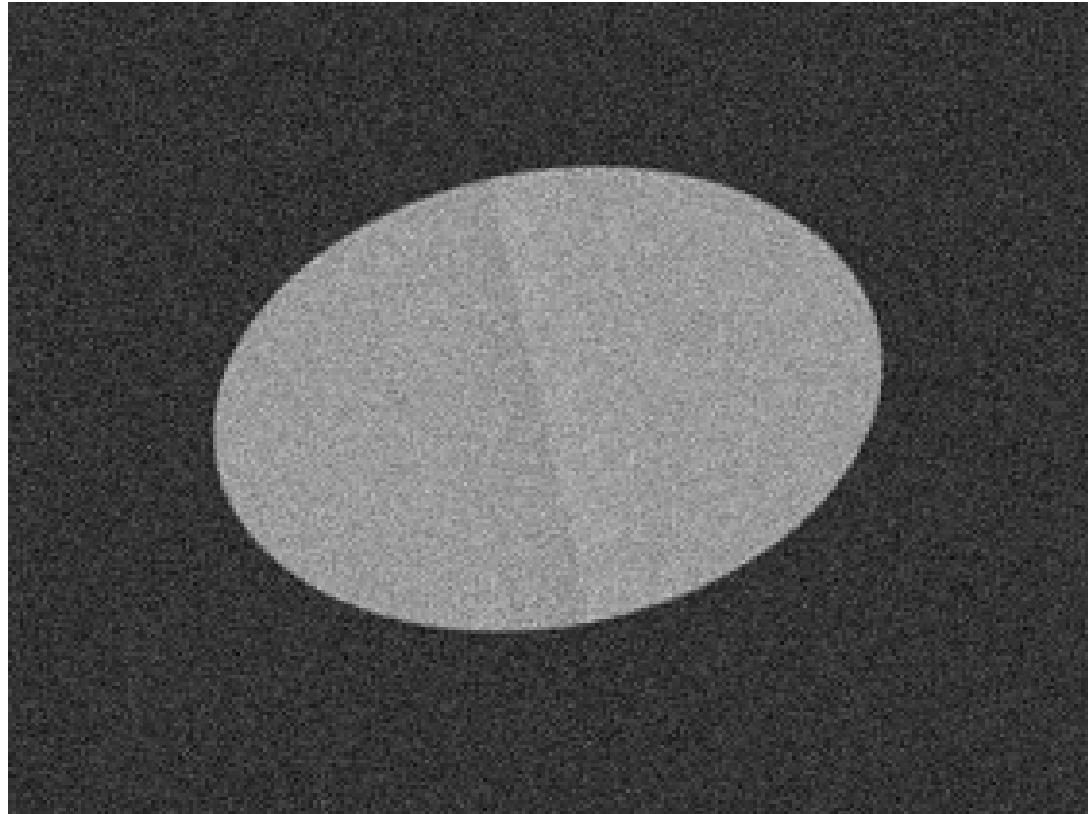

Which objects are brighter?

# Human vision has its limitations...

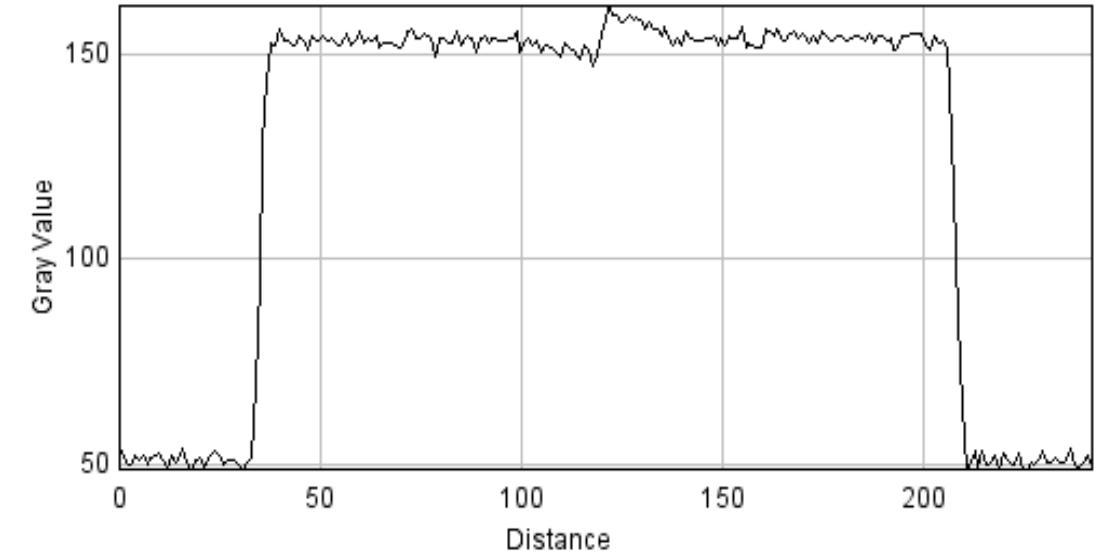

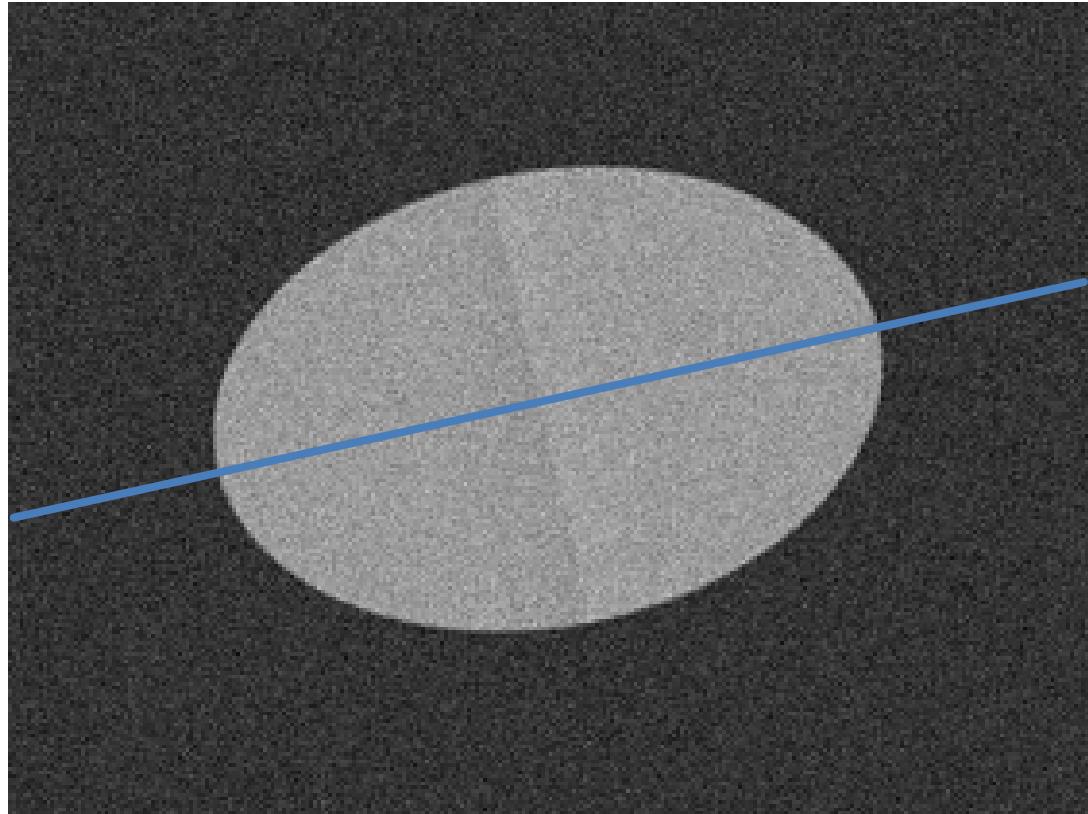

Which objects are brighter?

# Human vision has its limitations...

Which side of this object is brighter?

# Human vision has its limitations...

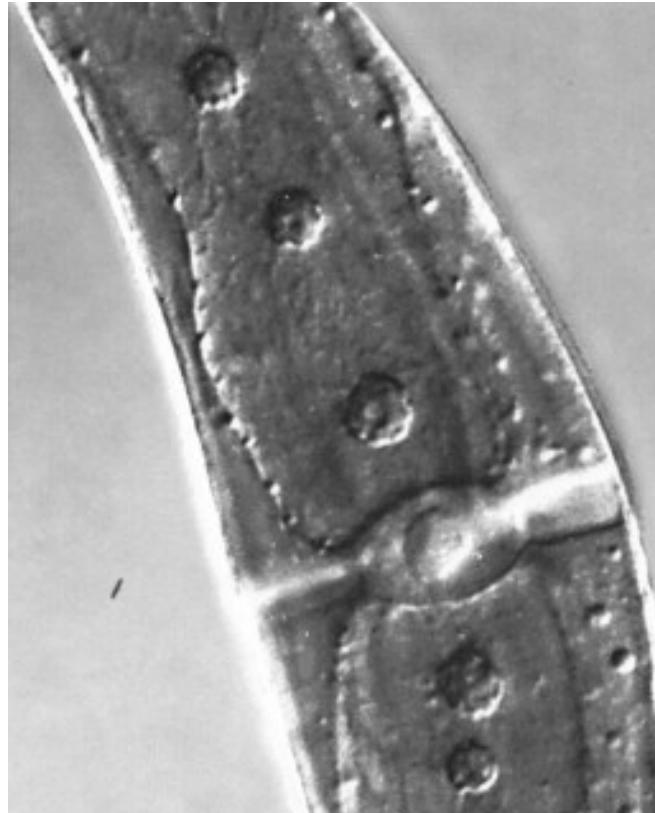

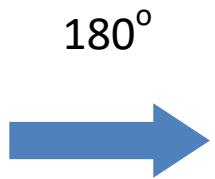

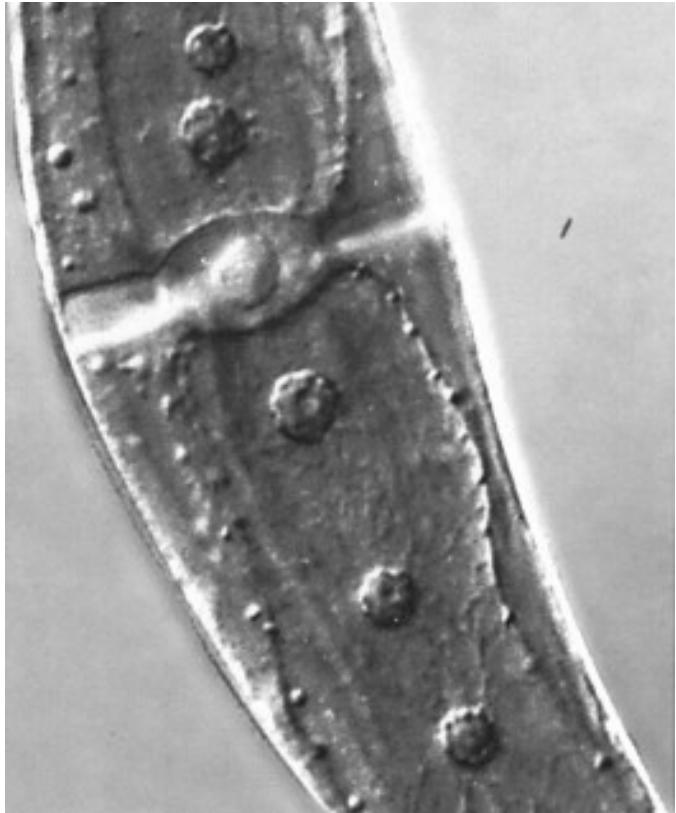

Which side of this object is brighter?

# Human vision has its limitations...

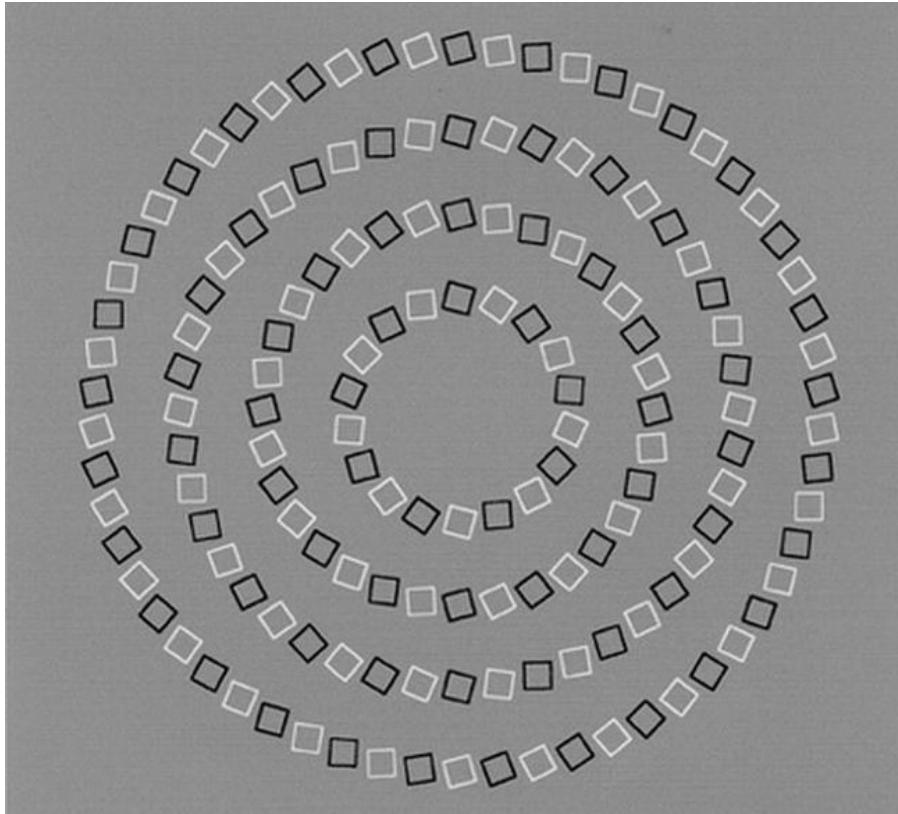

Are the cells popping in or out?

# Human vision has its limitations...

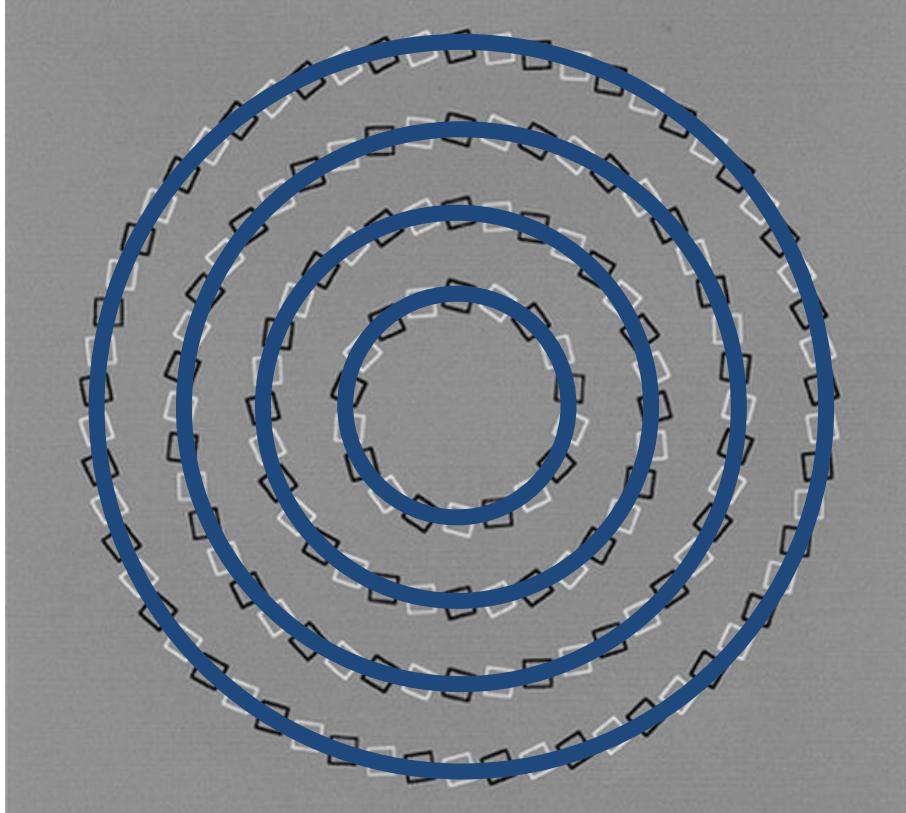

Are the cells  
popping in or out?

# Human vision has its limitations...

What pattern do the  
squares form?

# Human vision has its limitations...

What pattern do the  
squares form?

# Human vision has its limitations...

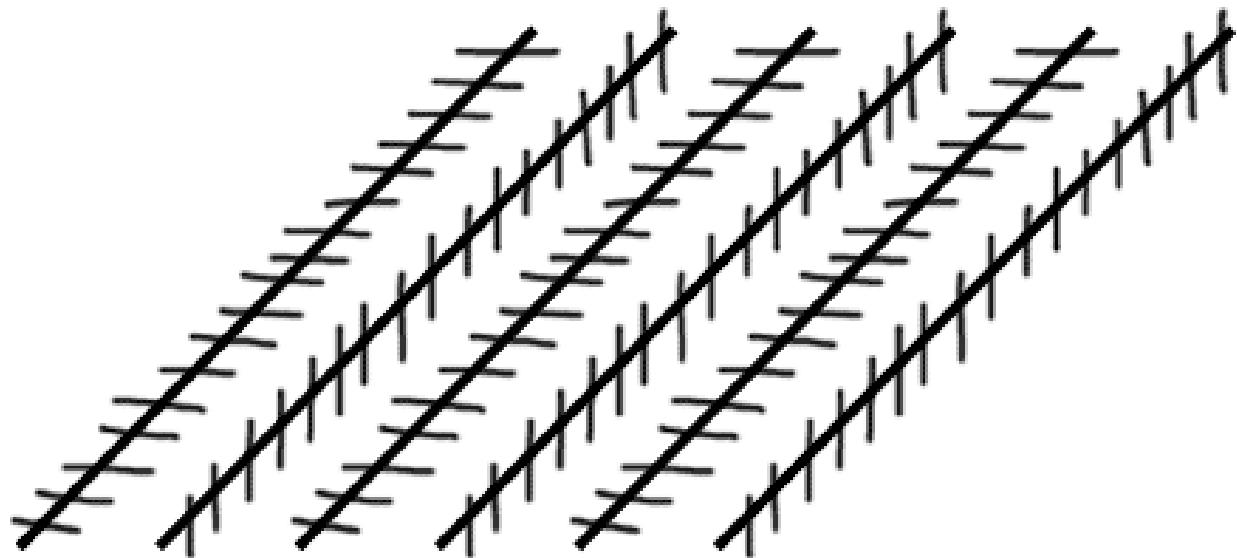

What object do you  
see in this image?

# Human vision has its limitations...

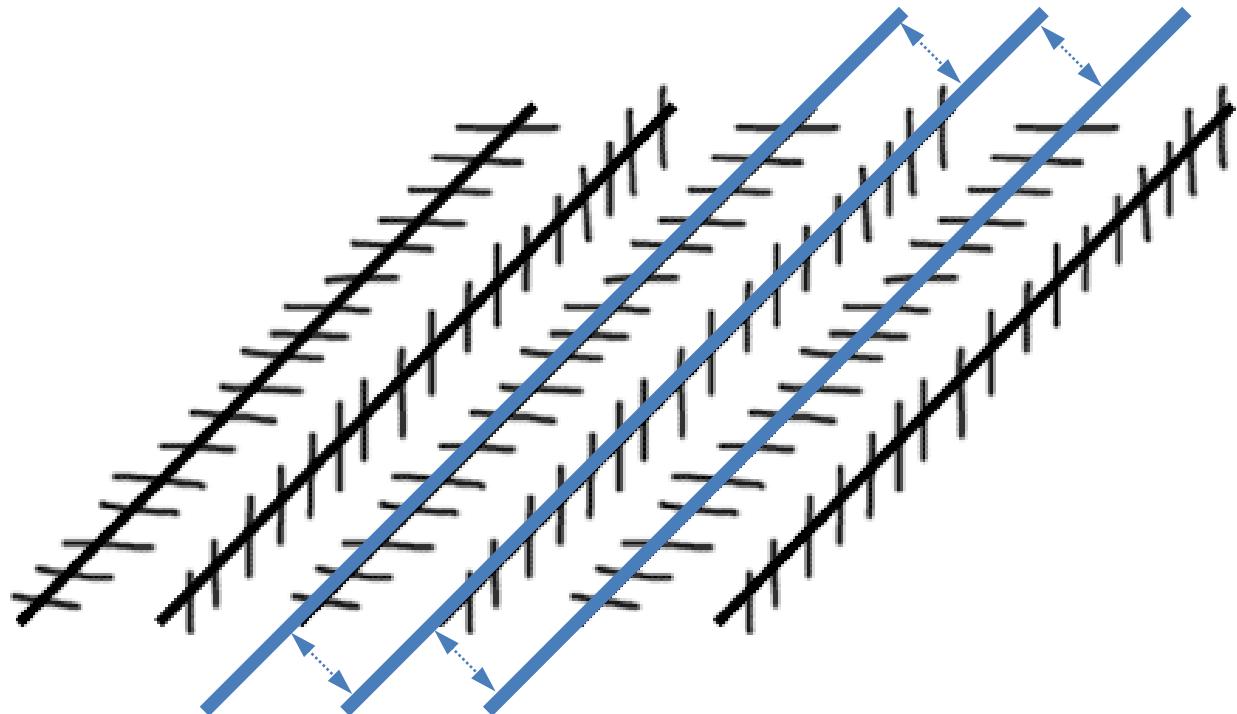

What object do you  
see in this image?

# Human vision has its limitations...

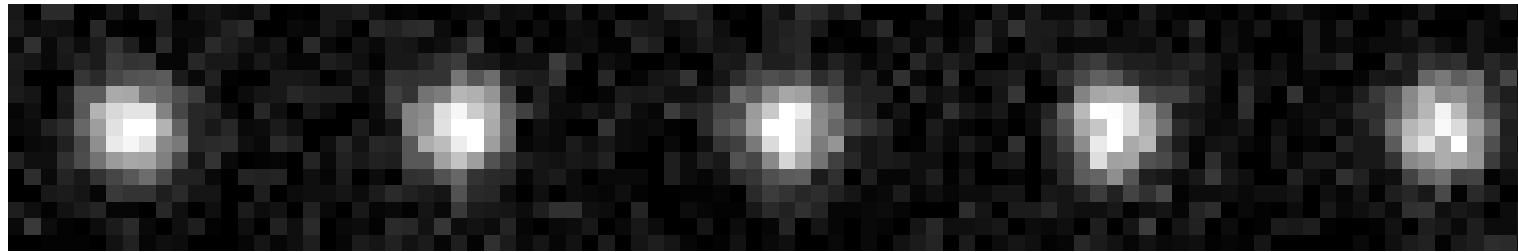

How do the main lines run  
with respect to each other?

# Human vision has its limitations...

How do the main lines run  
with respect to each other?

# Human vision has its limitations...

In which direction are these particles moving ?

# Human vision has its limitations...

# Course rationale

## Human vision has its limitations

- Intensities, shapes, patterns, motions can be misinterpreted
- Is labor intensive, time-consuming, subjective, error-prone

## Computer vision can potentially improve this

- Computers can work day and night without getting tired
- Analyze information quantitatively and objectively
- Potentially more accurate, precise, reproducible

*If the methods and tools are well designed!*

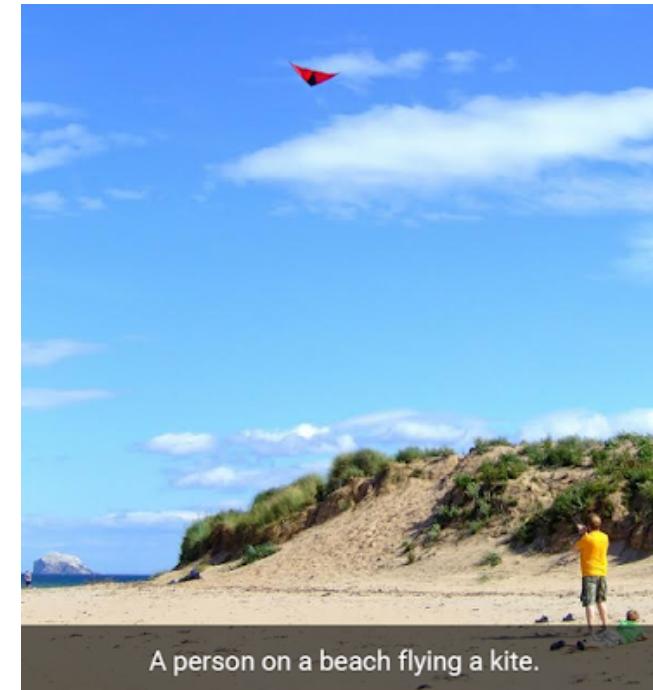

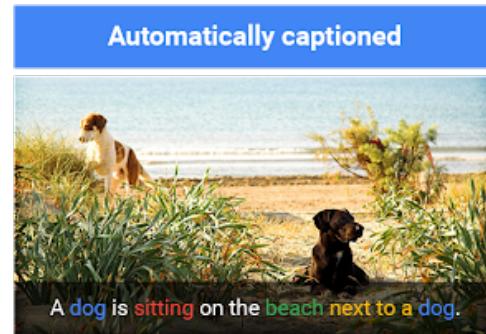

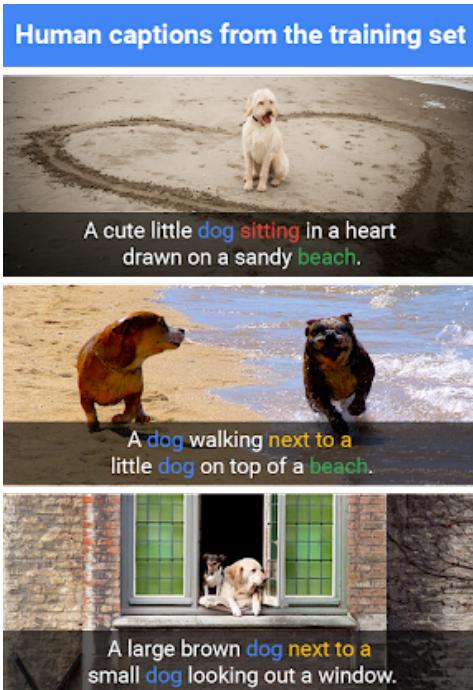

# Application: 3D shape reconstruction

Project [VarCity](#) recreates 3D city models using social media photos

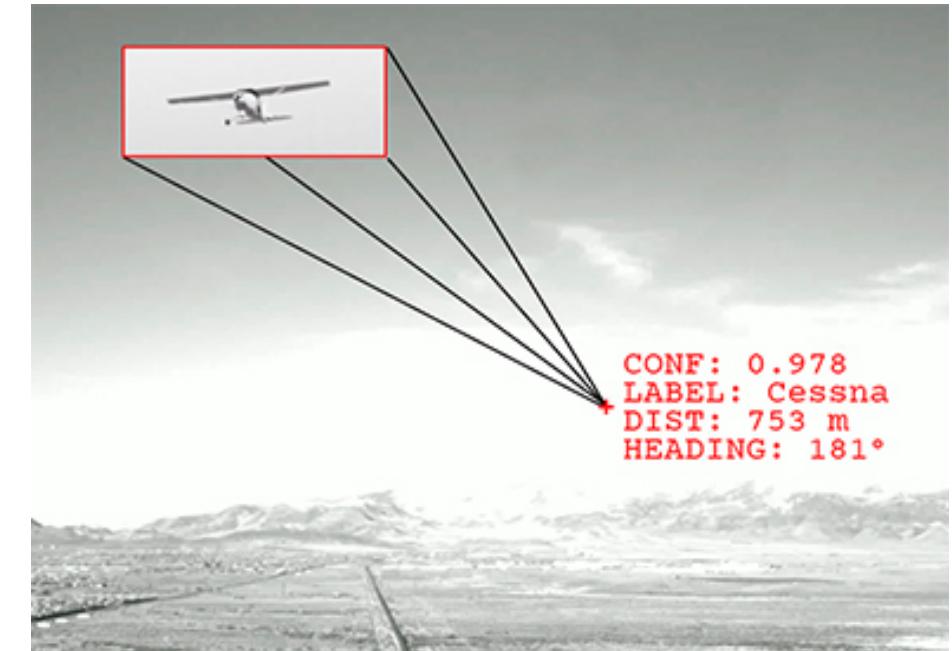

# Application: image captioning

[Google's Show and Tell](#) open-source image captioning model in TensorFlow

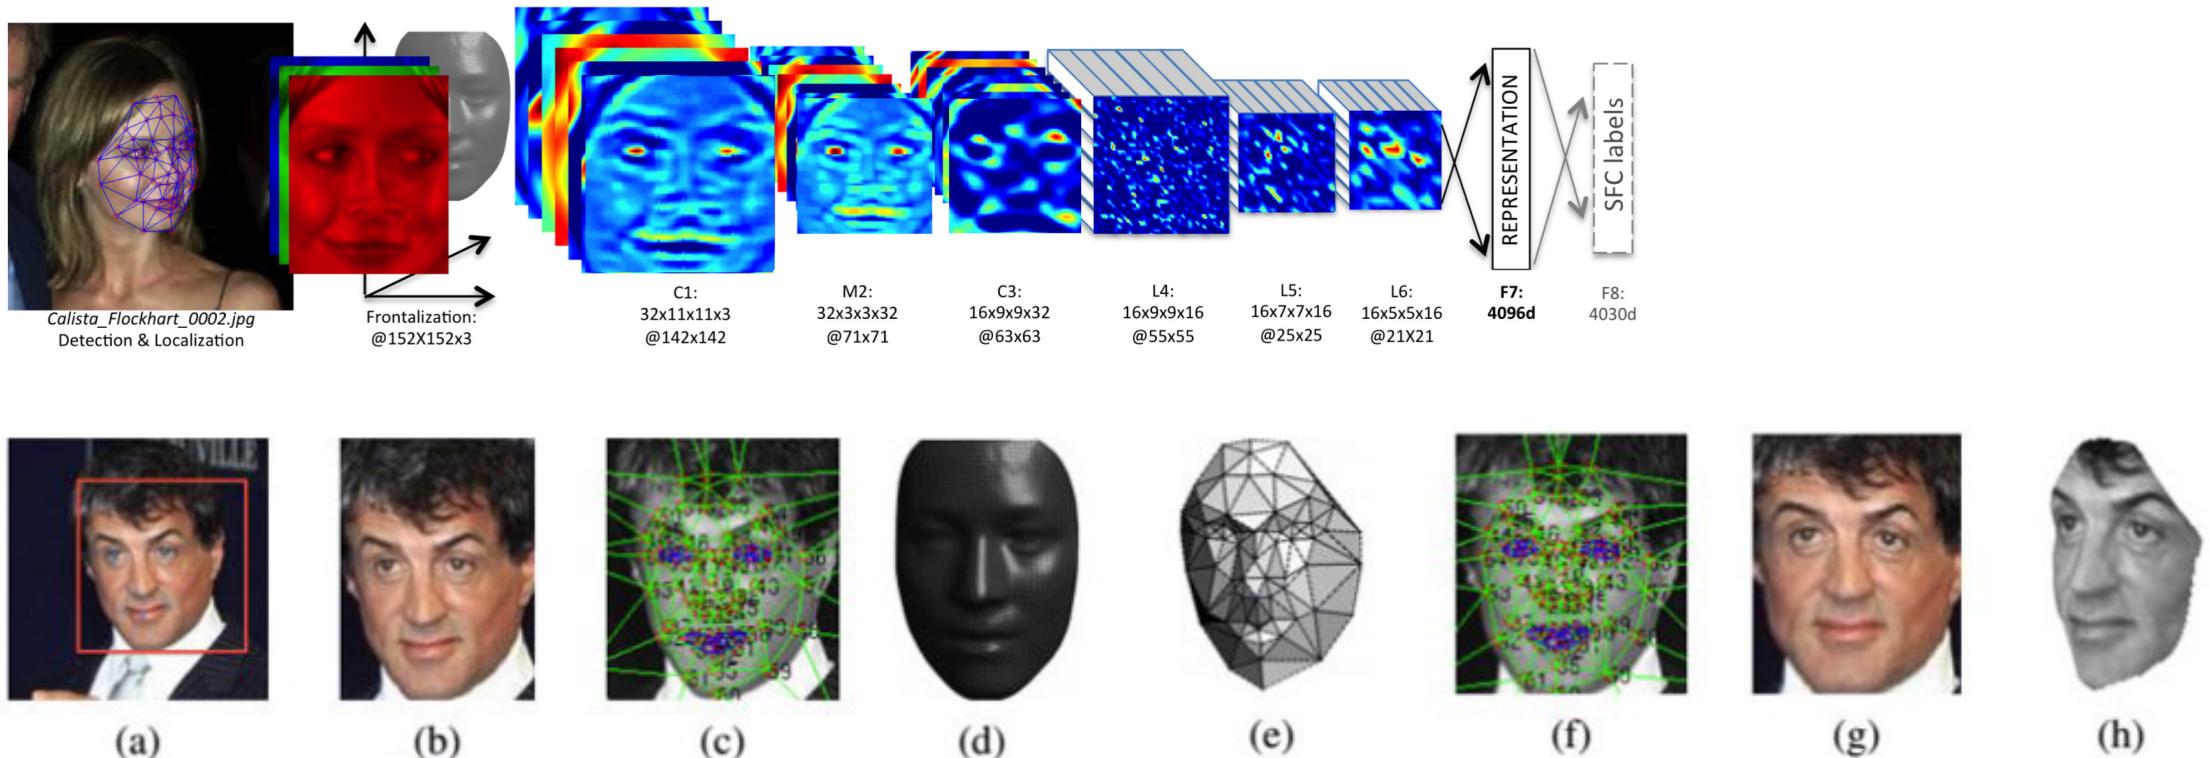

# Application: intelligent collision avoidance

[Iris Automation](#) provides safer drone operation with intelligent collision avoidance

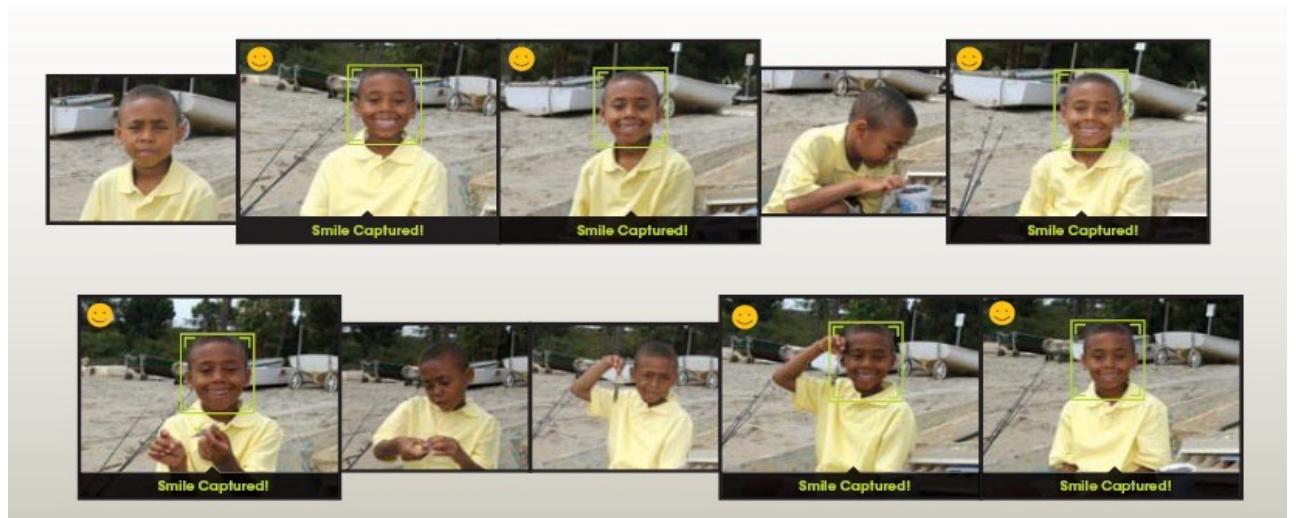

# Application: face detection and recognition

Facebook's [DeepFace](#) project nears human accuracy in identifying faces

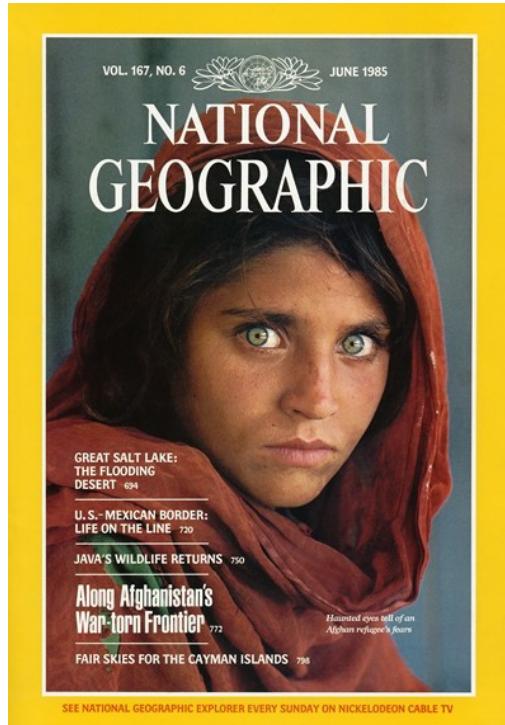

# Application: face detection and recognition

For improving image capture on digital cameras

# Application: vision-based biometrics

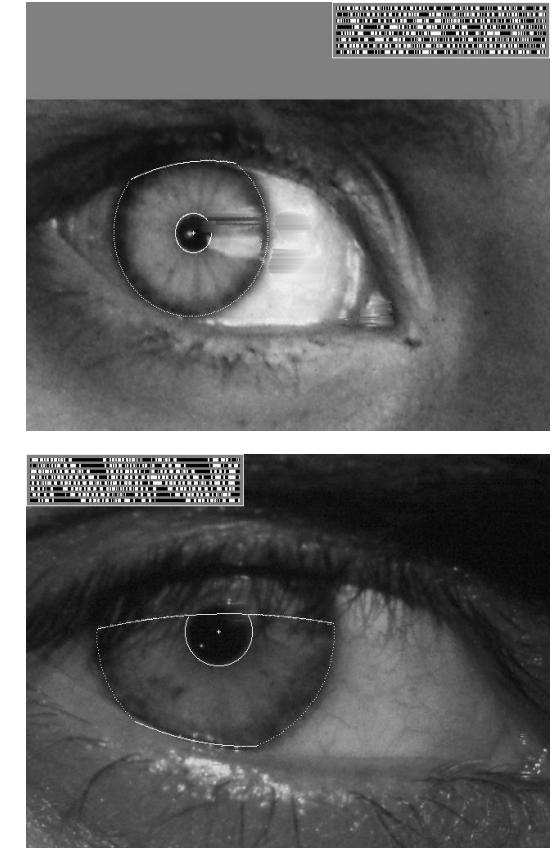

Who is she?

[How the Afghan girl was identified by her iris patterns](#)

The remarkable story of Sharbat Gula, first photographed in 1984 aged 12 in a refugee camp in Pakistan by National Geographic photographer Steve McCurry, and traced 18 years later to a remote part of Afghanistan where she was again photographed by McCurry...

# Application: logging in without a password

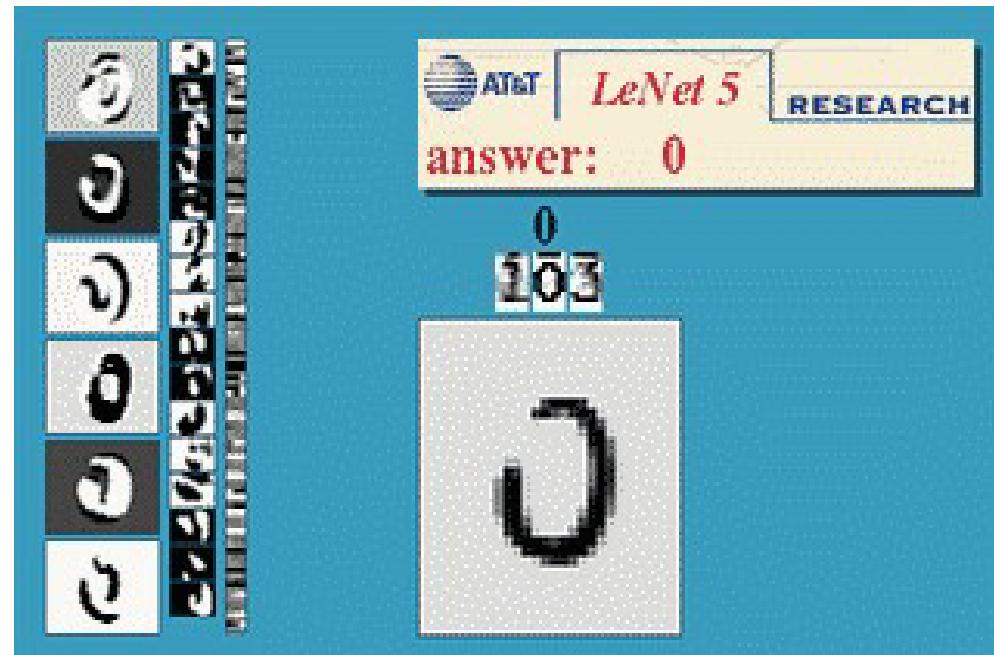

Fingerprint scanners  
on modern laptops  
and other devices

Windows Hello makes  
logging in as easy as  
looking at your PC

# Application: optical character recognition (OCR)

Converting scanned documents or number plates to processable text

# Application: landmark recognition

**Tower Bridge**

The Tower Bridge is a combined bascule and suspension bridge in London, built between 1886 and 1894, designed by Horace Jones and engineered by John Wolfe Barry. The bridge crosses the River Thames close to the Tower of London and is one of five London bridges owned and maintained by the Bridge House Estates, a charitable trust founded in 1282. The bridge was constructed to give better access to the East End of London, which had expanded its commercial potential in the 19th century. The bridge was opened by Edward, Prince of Wales and Alexandra, Princess of Wales in 1894.

The bridge is 800 feet (240 m) in length and consists of two 213-foot (65 m) bridge towers connected at the upper level by two horizontal walkways, and a central pair of bascules that can open to allow shipping. Originally hydraulically powered, the operating mechanism was converted to an electro-hydraulic system in 1972. The bridge is part of the A100<sup>[1]</sup> London Inner Ring Road and thus the boundary of the London congestion charge zone, and remains an important traffic route with 40,000 crossings every day. The bridge deck is freely accessible to both vehicles and pedestrians, whereas the bridge's twin towers, high-level walkways and Victorian engine rooms form part of the Tower Bridge Exhibition.

Tower Bridge has become a recognisable London landmark. It is sometimes confused with London Bridge, about 0.5 miles (0.8 km) upstream, which has led to a popular urban legend about an American purchasing the wrong bridge. Several stunt pilots have flown underneath the bridge, including the pioneering Francis McClean.

**Contents [hide]**

- 1 History
  - 1.1 Inception
  - 1.2 Construction
  - 1.3 Opening
  - 1.4 20th century
  - 1.5 21st century
- 2 Design
  - 2.1 Structure
  - 2.2 Hydraulic system
  - 2.3 Signalling and control
- 3 Traffic
  - 3.1 Road
  - 3.2 Rail

Coordinates 51°30'20"N 0°43'1"W  
Carries London Inner Ring Road  
Crosses River Thames  
Locale London boroughs:

- north side: Tower Hamlets
- south side: Southwark

  
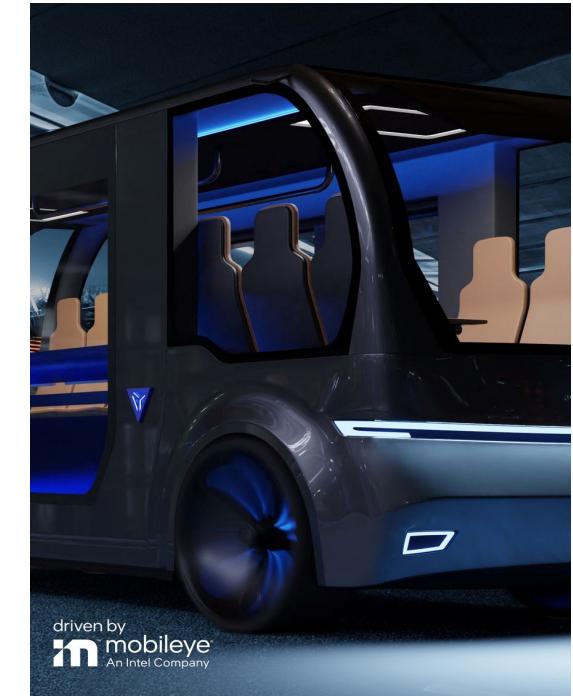

Named for Tower of London  
Maintained by Bridge House Estates  
Heritage status Grade I listed building  
Website www.towerbridge.org.uk<sup>[2]</sup>  
Preceded by London Bridge  
Followed by Elizabeth II Bridge  
**Characteristics**

- Design Bascule bridge / Suspension Bridge
- Total length 800 feet (240 m)
- Height 213 feet (65 m)  
**History**
- Architect Horace Jones
- Construction 21 June 1886
- start
- Construction end 1894
- Opened 30 June 1894
- Location**
  - Walthamstow
  - Hampstead
  - Camden Town
  - Stratford
  - Barking

# Application: autonomous vehicles

[Intel's Mobileye](#) makes cars safer and more autonomous

The screenshot shows the Mobileye website interface. At the top, there are two tabs: "manufacturer products" on the left and "consumer products" on the right. Below the tabs is a large banner with the slogan "Our Vision. Your Safety." and an overhead view of a car with three camera types labeled: "rear looking camera" (top), "forward looking camera" (front), and "side looking camera" (sides). In the bottom section, there are three main product highlights: "EyeQ Vision on a Chip" (with an image of a chip), "Vision Applications" (with an image of a pedestrian crossing), and "AWS Advance Warning System" (with an image of a display screen). To the right of these highlights is a "News" sidebar with a list of articles and a "Events" sidebar with links to "Mobileye at Equip Auto, Paris, France" and "Mobileye at SEMA, Las Vegas, NV".

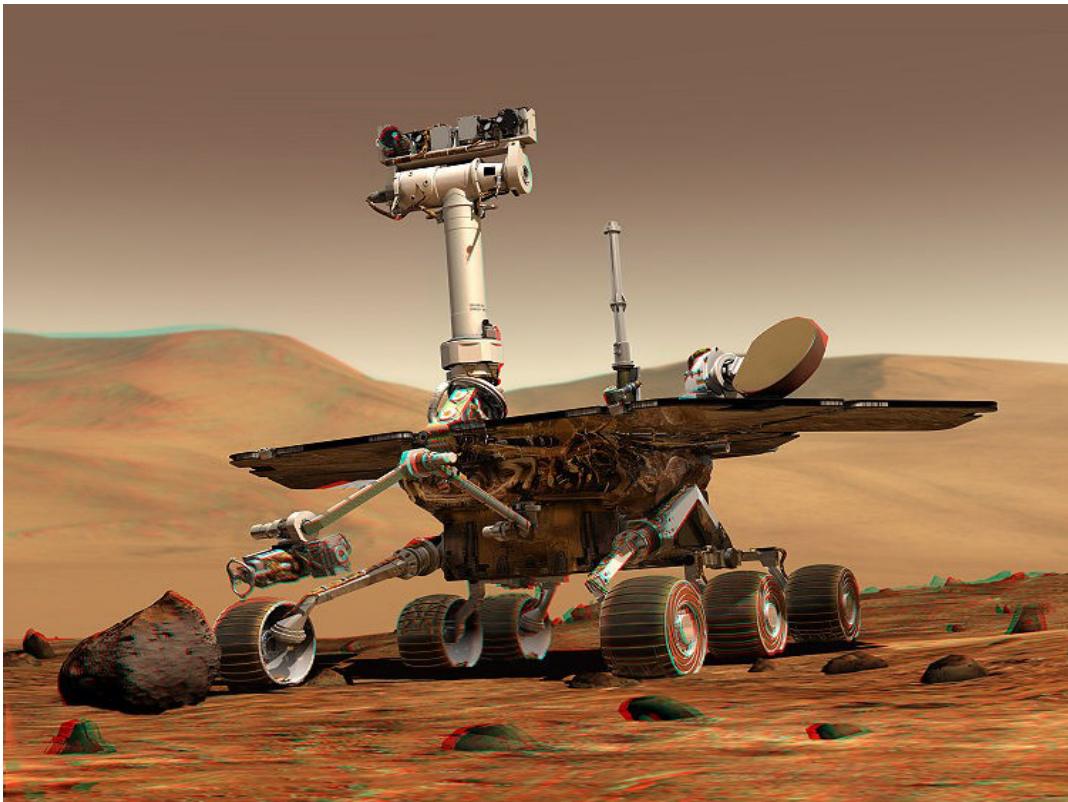

# Application: space exploration

NASA's Mars Exploration Rover Spirit autonomously captured this picture in 2007

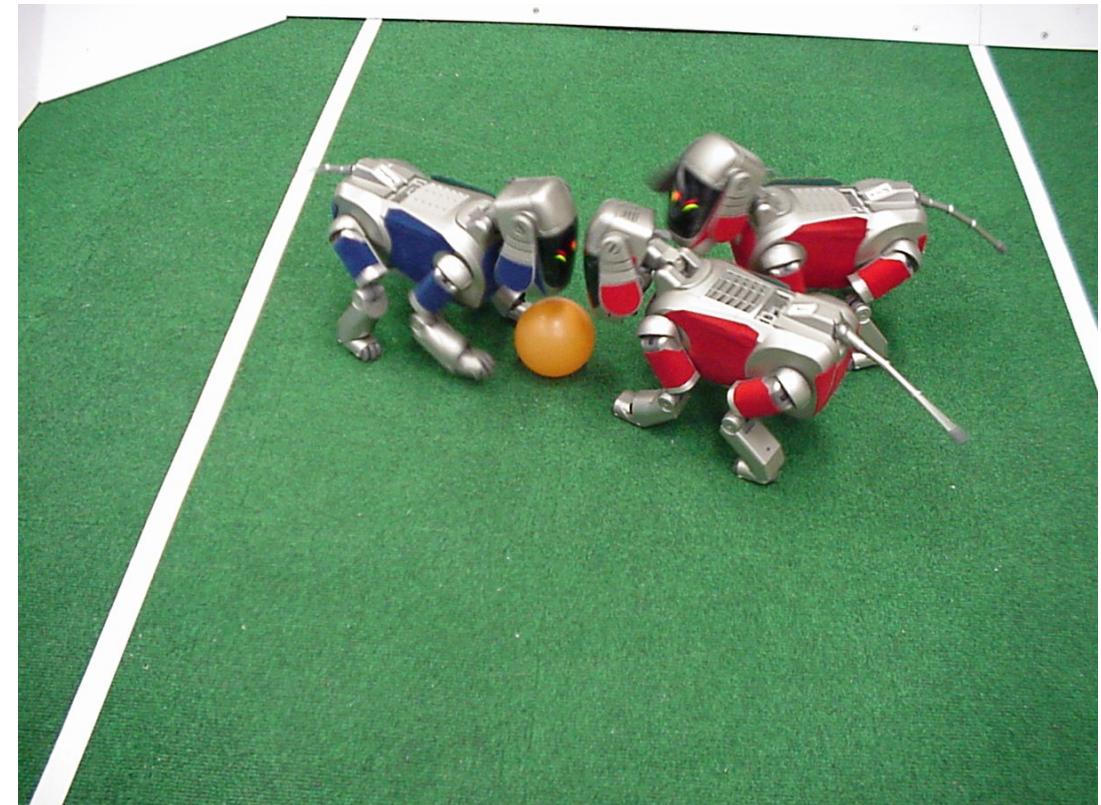

Vision systems used for panorama stitching, 3D terrain modeling, obstacle detection, position tracking  
See [Computer Vision on Mars](#) for more information

# Application: machine vision in robotics

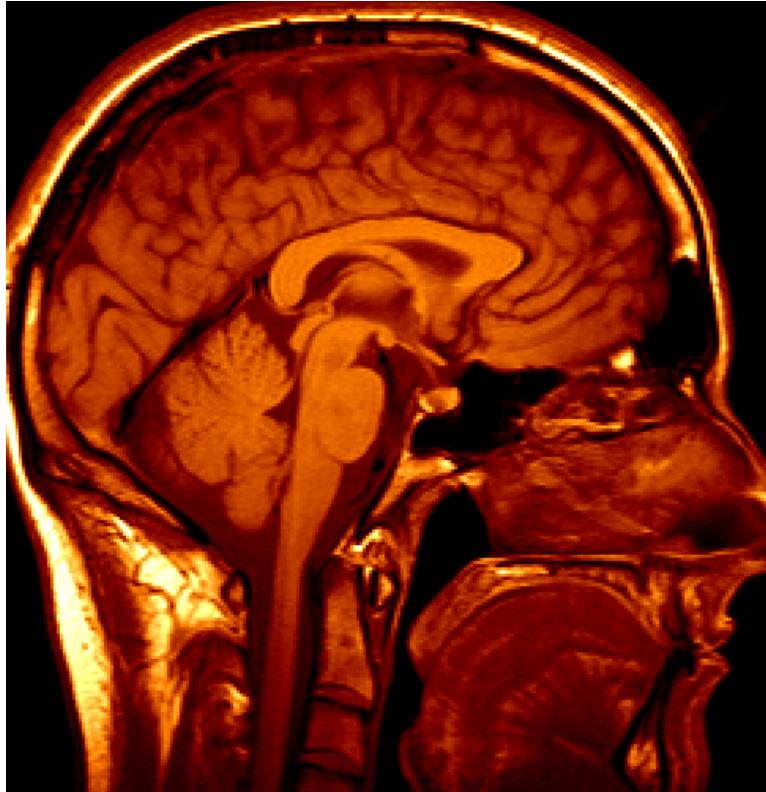

[NASA's Mars Spirit Rover](#)

[RoboCup](#)

# Application: medical imaging

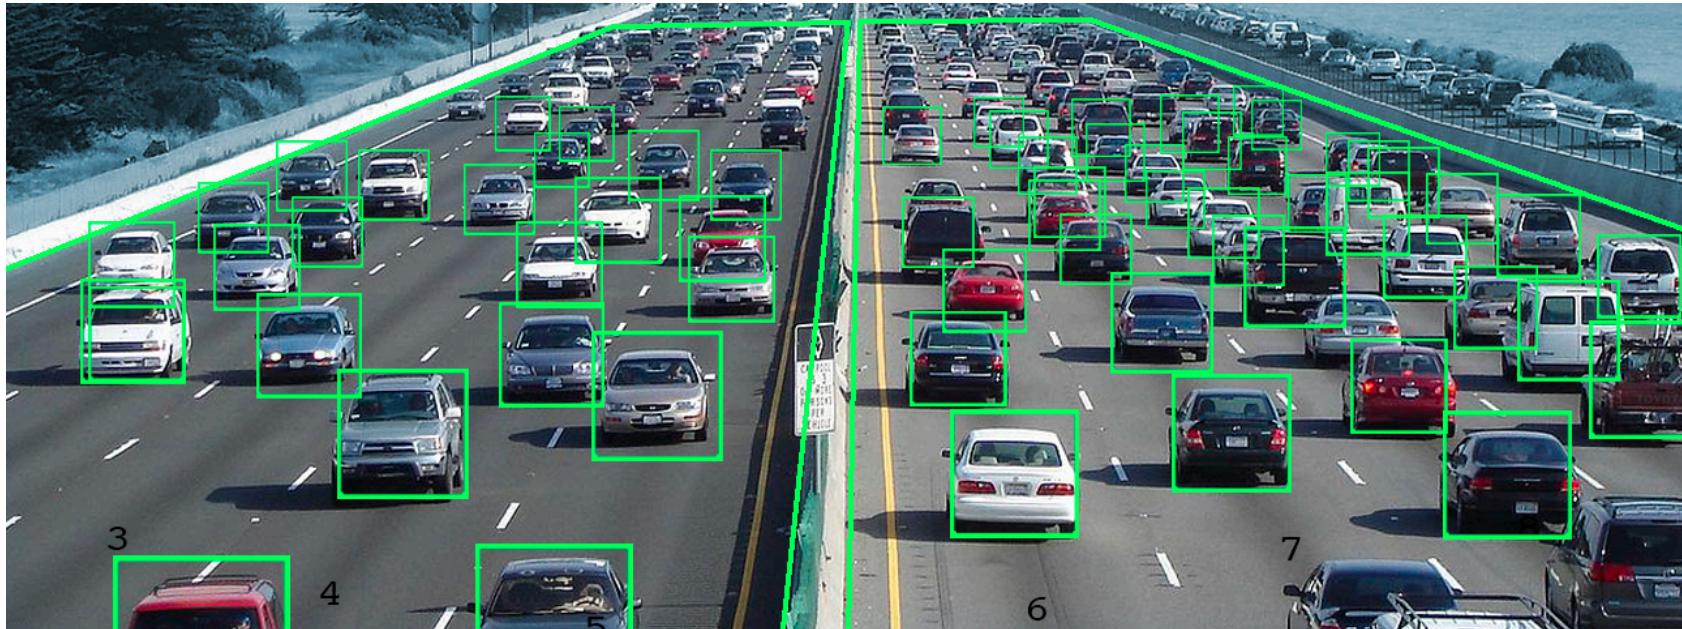

Computer Aided Diagnosis

Image Guided Surgery

# Application: video surveillance

Software from [TrafficVision](#) turns traffic cameras into intelligent sensors

- Traffic monitoring
- Action recognition
- Incident detection
- Speed estimation
- Vehicle counting
- ...

# Goals and challenges of computer vision

- Extract useful information from images, both metric and semantic
- Data heterogeneity, ambiguity, and complexity are a big challenge
- Significant progress in recent years due to various improvements:
  - Processing power
  - Memory capacity
  - Storage capacity
  - Data availability
- Careful design of every step in the computer vision workflow:  
images > measurements > models > algorithms for learning and inference

# Computer vision tasks

- Obtain simple inferences from individual pixel values
- Group pixels to separate object regions or infer shape information
- Recognise objects using geometric or statistical pixel information
- Combine information from multiple images into a coherent whole

Requires understanding of the **physics of imaging** and the use of **mathematical and statistical models** for information extraction

# Critical issues in computer vision

- **Sensing:** how do sensors obtain images of the world?
- **Encoding:** how do images encode information of the scene?
- **Representation:** what are appropriate representations of objects?
- **Algorithmics:** what are appropriate algorithms to process image information?
- **Modelling:** what are optimal models to construct scene descriptions?

# Low-level computer vision

This concerns mostly **image processing** (image in > image out)

- **Sensing:** image capture and digitization
- **Preprocessing:** suppress noise and enhance object features
- **Segmentation:** separate objects from background and partition them
- **Description:** compute feature maps which differentiate objects
- **Labeling:** assign labels to image segments (regions of interest)

# High-level computer vision

This concerns deeper **image analysis** (image in > knowledge out)

- **Detection:** detect, localize, count objects of interest
- **Recognition:** identify object types based on low-level information
- **Classification:** assign unique labels to recognized objects
- **Interpretation:** assign meaning to groups of recognized objects
- **Scene analysis:** complete understanding of the captured scene

# Assumed knowledge

To do this course successfully you should:

- Be able to program well in **Python** or willing to learn it independently
- Be familiar with **data structures and algorithms** and basic **statistics**
- Be able/learn to **use software packages** (OpenCV, Scikit-Learn, Keras)
- Be familiar with **vector calculus and linear algebra** or willing to learn it

Please self-assess **before** deciding to stay/enroll in the course

# Student learning outcomes

After completing this course, you will be able to:

- **Explain** basic scientific and engineering approaches to computer vision
- **Implement and test** computer vision algorithms using existing software
- **Build** larger computer vision applications by integrating software modules
- **Interpret and comment** on articles in the computer vision literature

# Course topics and lecturers

| Week | Topic                          | Lecturer                                      |
|------|--------------------------------|---|
| 1    | Introduction & Image Formation | Professor Erik Meijering                      |
| 2    | Image Processing               | Dr Dong Gong                                  |
| 3    | Feature Representation         | Professor Erik Meijering                      |
| 4    | Pattern Recognition            | Dr Dong Gong                                  |
| 5    | Image Segmentation             | Professor Erik Meijering                      |
| 6    | Flexible Week (No Lectures)    |   |
| 7    | Motion and Tracking            | Professor Erik Meijering                      |
| 8    | Deep Learning                  | Dr Dong Gong                                  |
| 9    | Applications                   | Dr Tariq Khan, Dr Sonit Singh, Dr Yanming Zhu |
| 10   | Project Demos                  | Coordinated by Course Admin                   |

# Weekly class structure

- **Lectures:** Tuesdays 9-11am & Fridays 1-2pm (live stream via BB Collab)  
All lectures will be live online with an opportunity to ask questions
- **Lab consultations:** Fridays 2-3pm in weeks 1-5 (online via BB Collab)  
Software demo in week 1 and lab consultations with your assigned tutor in weeks 2-5
- **Project consultations:** Fridays 2-3pm in weeks 6-9 (online via BB Collab)  
All project consultations will be live online with your assigned tutor
- **Project demos:** Scheduled lecture hours in week 10 (online via BB Collab)  
Detailed roster will be announced on WebCMS3 page of the course

# Assessments

| Assessment    | Marks | Release          | Due              |
|---------------|-------|------------------|------------------|
| Assignment    | 10%   | Week 2           | Week 4           |
| Lab Work (4x) | 10%   | Weeks 2, 3, 4, 5 | Weeks 3, 4, 5, 6 |
| Group Project | 40%   | Week 5           | Week 10          |
| Exam          | 40%   | Exam Period      | Exam Period      |

**Late submission penalty:** Unless you have received special dispensation from the Lecturer in Charge, work submitted after the deadline **during term** will incur a penalty of 5% per day, capped at 5 days, after which submissions are no longer accepted. ***For the final examination, university exam rules apply.***

# Communication modes and etiquette

- **Online forum (Ed) is your first port of call** for queries of wider interest on lectures, assignment, labs, project, and assessments
- **Contact the LIC** for late submission, absence, assessment deadlines, and specific questions about the assignment, labs, project, and assessment contents
- **Contact the course admin** for issues with enrolment, file submission, group enrolment, or other administration related matters
- **Team is committed to respond quickly** to queries with a maximum turnaround of 24 hours
- **Do observe standards of equity and respect** in dealing with all students and staff, in person, emails, forum posts, and all other communication
- **Language of communication is English**

# Special Consideration

- If your work in this course is affected by unforeseen adverse circumstances, you should **apply for Special Consideration via the UNSW website**
- UNSW handles Special Consideration requests centrally, so **use the website and do not email the Lecturer in Charge about Special Consideration requests**
- Special Consideration **requests must be accompanied by documentation**
- **Marks are calculated the same way** as other students who sat the original assessment
- If you are awarded a Supplementary Exam and do not attend, your exam mark will be zero

**See the course webpage on WebCMS3 for more detailed information and links**

# Plagiarism Policy

**READ the UNSW Policy and Procedure on this (links in the course outline on WebCMS3)**

For the purposes of COMP9517, plagiarism includes copying or obtaining all, or a substantial part, of the material for your assignment, whether written or graphical report material, or software code, **without written acknowledgement** in your assignment from:

- A location on the internet
- A book, article or other written document (published or unpublished) in any form
- Another student, whether in your class or another class, at UNSW or elsewhere
- Someone else (for example someone who writes assignments for money)

# Plagiarism Policy

- If you copy material from another student or non-student **with acknowledgement**, you will not be penalized for plagiarism, but the marks you get for this will be **at the marker's discretion** and will reflect the marker's perception of the amount of work you put into finding and/or adapting the code/text
- If you use text found in a publication (on the internet or elsewhere), the marks you get for this will be **at the marker's discretion** and will reflect the marker's perception of the amount of work you put into finding and/or adapting the text

**Assessments provide opportunities for you to develop important skills**

**Use these opportunities**

# Further information on WebCMS

Please be sure you are familiar with:

- Communication Etiquette
- Special Consideration
- Student Conduct
- Plagiarism Policy
- Academic Integrity

# Further reading on discussed topics

In the lectures we will be referring to various online resources for further reading:

- Richard Szeliski, [Computer Vision: Algorithms and Applications](#), 2nd Edition, Springer, 2021
- Dana H. Ballard and Christopher M. Brown, [Computer Vision](#), Prentice Hall, 1982
- Ian Goodfellow, Yoshua Bengio, Aaron Courville, [Deep Learning](#), MIT Press, 2016
- David A. Forsyth and Jean Ponce, [Computer Vision: A Modern Approach](#), Prentice Hall, 2011
- Simon J. D. Prince, [Computer Vision: Models, Learning and Inference](#), CUP, 2012

And other books, articles, and resources online or via the UNSW Library

# Further reading on discussed topics

- Chapter 1 of Szeliski for a general introduction to computer vision
- Appendix A of Szeliski for a recap of linear algebra and numerical techniques
